

Walmart Website Application

Introduction

The Walmart Application is a simple web-based shopping system that allows users to view products, add items to a cart, and manage purchases online.

Objectives

- To create an online shopping application
- To display available products
- To allow users to add items to cart
- To manage product and user data
- To provide a simple shopping experience

Technologies Used

- HTML
- CSS
- JavaScript
- Bootstrap

Working of the Application

Users can view available products and add them to their cart. The application stores product data in a database and manages orders based on user selection.

Code Snippet:

Function addToCart()

```
// Add product to cart
function addToCart(productId, productName, productPrice, productImage) {
  const existingItem = cart.find(item => item.id === productId);

  if (existingItem) {
    existingItem.quantity += 1;
  } else {
    cart.push({
      id: productId,
      name: productName,
      price: productPrice,
      image: productImage,
      quantity: 1
    });
  }
}
```

Cart and button(btn) CSS:

```

.btn-detail-cart:hover {
  background-color: #0097a7;
  transform: scale(1.05);
}

/* =====
| | Cart Page
===== */

.cart-section {
  padding: 40px 0;
  min-height: 60vh;
}

.cart-table {
  background: white;
  border-radius: 10px;
  box-shadow: 0 2px 8px rgba(0, 0, 0, 0.1);
  overflow: hidden;
}

.cart-table table {
  width: 100%;
  margin: 0;
}

```

Advantages

- Easy online shopping
- Simple interface
- Quick product browsing
- Efficient cart system

Conclusion

The Walmart Application provides a basic online shopping system that helps users browse products and manage orders easily using web technologies.
